

Finding Power for Floating Point

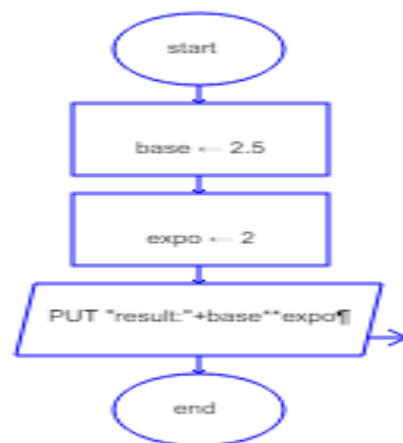

Aim:

To implement Finding Power for Floating Point using RAPTOR.

Procedure:

1. Open RAPTOR and create a new flowchart.
2. Declare the required variables.
3. Input the required values.
4. Initialize variables.
5. Use the required logic with decision and loop symbols.
6. Process all inputs until the required condition is satisfied.
7. Display the output.
8. Stop the program.

Flowchart :

```
RAPTOR MasterConsole
result:6.25
--- Run Complete! 5 Symbols Evaluated ---
```

The screenshot shows a window titled 'RAPTOR MasterConsole'. The output displayed is 'result:6.25' followed by a status message '--- Run Complete! 5 Symbols Evaluated ---'.
